Guilherme Keidi Suzuki 鈴木 恵二

Full-stack developer and CEO of Cuoncient. I build apps and AI agents for companies in Brazil and the United States.

I'm 26 years old and speak Portuguese, English, Spanish and Japanese.

WhatsApp +55 (11) 93352-8251, cuoncient.com/gui, github.com/yugksuzuki. Born August 21, 2000.

Apps I built

I've shipped apps to the App Store and Google Play and built APKs that a team installs straight onto Android. Each app shows the identifier it's registered under.

Brazuka Club Book

iOS and Android, in the stores

A business directory for Brazilians who live abroad. Grocery stores, bakeries, pharmacies, gyms and clinics that serve people in Portuguese, each with hours, address and contact.

More than 130 categories. Brazuka Club LLC, USA. Version 1.0.22 on the App Store, from December 2024.

br.com.brazukaclubapp brazukaclub.com

Center Painel

Android APK and installable app

The store team's app, with counter sales and a barcode scanner, the order queue, the courier view and consumer e-invoices. Customers order through a second app installed from the browser.

GitHub Actions builds the APK for each release as a Trusted Web Activity. Next.js 16, Firebase and Focus NFe. Center Conveniência, PR.

com.cuoncient.centerpainel loja.cuoncient.com

Couponlandia

Web app

A deals marketplace in South Florida, with Brazilian products, local vendors and daily coupons in the VIP area.

It opens on the phone like an app. The VIP area runs in English, Portuguese and Spanish. Built in 2024.

marketplace.couponlandia.com couponlandia.com

Kashi

Installable app, works offline

An app for learning Japanese through the songs you like, with automatic furigana, translation and lyrics synced to the video.

A Cuoncient product. 36 automated tests. Three.js, GSAP and kuromoji.

jpcourse.cuoncient.com jpcourse.cuoncient.com

YourFace

Prototype, Shopify app

It recommends a store's products from the photos a person saved on Instagram or Pinterest. The AI compares the images by what they show.

Image embeddings with CLIP, search in Pinecone and an app embedded in Shopify. Node and Express, 2025.

github.com/yugksuzuki/insmatch

AI agents and automations

All of these run today for real clients. Open one to see how it was built and what it costs.

The agent patterns I use

Writer and checker. One step writes and another checks it against fixed rules. If it fails, it goes back to be rewritten. Used in the blog engine.

Routing. The agent reads each inbox item and decides where it goes: a task, an idea or a waiting list. Used in the morning brief.

Person in the loop. The AI proposes and a person approves before anything is published, billed or invoiced. Used in the invoice panel.

Search by meaning (RAG). The model looks up what already exists before it writes, so it doesn't repeat itself. Used on the city pages.

Blog engine

Art 7 Epoxy, USA

Writes and checks local SEO articles three times a week. Each one waits for a person to review and publish it.

> Every draft goes through 14 rules before it reaches WordPress. If it fails, Claude rewrites it up to three times. Each article costs between US$ 0.10 and US$ 0.21.

Invoice panel DUACT, SC

Reads the order sheet every morning and builds the invoice order through the ERP's API, with the total matching to the cent.

> It has created orders of 80 and 103 lines through the API. When a case breaks the rules, a person describes it in plain text and Claude proposes the line items. A person always issues the invoice.

Sales rep chatbot on WhatsApp DUACT, SC

The customer types their city and the bot replies with the sales rep for that region and a link to the rep's WhatsApp.

> It covers the rep list for Rio Grande do Sul, Santa Catarina and Paraná, and finds the city even with typos, accents left out or the state written in full.

The operation's brain Cuoncient, in-house

Two Claude accounts and the n8n routines read and write the same vault of notes, so no conversation starts from scratch.

> The morning brief runs on weekdays at 6:40 and the weekly review on Fridays. There are 77 files versioned on GitHub.

RAG over the client's pages Art 7 Epoxy, USA

Searches the site's pages by meaning, so new city pages don't repeat the ones already live.

> 51 pages and 526 passages are indexed. The latest batch of 8 new pages came out without a single run of 10 words copied from the site.

Instagram post engine Cuoncient, pilot under construction

Claude writes the copy and picks the layout, and the art comes out of an HTML template with the brand's tokens. Every post waits in an approval queue.

> Metrics come back at 24 hours, 72 hours and 7 days. Claude proposes creative rules from them, and a rule only enters the next prompt after I approve it.

Video engine BR Oxigênio, GO

One webhook request turns into finished video in the client's folder, in 9:16 and 4:5, with and without captions.

> Each render takes about 3 minutes and delivers 10 files, with audio normalized to −14 LUFS. The extra cost is close to zero.

Landing page from Instagram Cuoncient, client pages

Collects the client's profile, saves photos and captions to a repository and leaves the context ready to build the page.

> Collecting 50 posts takes 3 to 5 minutes and costs a few cents. Address, price and testimonials only go on the page if the client provides them.

AI product photos, checked by hand Center Conveniência, PR

AI only generates an image when there's no real photo of the product, and each generated image is compared against the real packaging.

> All 260 products in the store have a photo. 199 came from the old menu and the rest were generated and reviewed. Eight images were rejected for the wrong color or version.

Weekly page watch Art 7 Epoxy, USA

Every Monday at 10:00 it crawls the sitemap and files a report on the template mistakes that slipped through.

> It looks for things like the model city's name left behind in the text, FAQs and image alt text of other cities' pages.

Store and taxes through the API DUACT, SC

Applies the tax discount and tax group product by product through the API, so the checkout total matches the catalog.

> 105 products were adjusted and checked against Wix's own tax calculation. 98 match exactly and 7 come out one cent lower.

Ad performance analysis V.BIKE, SC

I read Meta Ads exports in Python to decide what to adjust and what to leave in the learning phase.

> After fixing the targeting, cost per conversation at one location dropped to R$ 2.50. The best ad set reached R$ 2.02.

Proposals that become web pages Cuoncient and the HotelariaWeb partnership

A sales proposal becomes a page with its own link to send on WhatsApp, with a PDF as backup.

> The B2B storefront proposal went out on the same day as the conversation with the client.

Processes turned into Claude skills Cuoncient, in-house

When a process works for one client, I write it down as a Claude skill to repeat it on the next one.

> Among them are the landing page from Instagram, the page visual review, the consolidated proposal and the Cuoncient web stack.

Cuoncient, the agency I run

I'm CEO and developer at Cuoncient and share the leadership with Agustin Pizarro. The agency does design, social media, websites, ads and automation for companies in Brazil and the United States.

Cuoncient has delivered **55** sites on Wix. Today it runs **46** projects on Vercel and **16** custom domains.

What the agency does

Design. Visual identity, website and landing page UI, print and digital pieces, art direction.

Websites and apps. Websites, landing pages, stores and systems on Wix, WordPress or our own code.

Automation and AI. Content that writes itself, site monitoring, reports and connections between tools.

Social media. Calendar per platform, photo and video shoots, pieces for feed, stories and reels.

Ads. Meta Ads, Google Ads and Local Services Ads, with lead capture and qualification.

Three cases

Art 7 Epoxy Massachusetts and New Hampshire, USA
Epoxy flooring site for New England, with pages per city, an on-site quote form and its own estimate calculator.
art7epoxy.com

DUACT Itapema Itapema, SC
Landing page for the Maxus 1000W line, built for test rides and direct sales, with specs, batteries, showroom and WhatsApp support in one flow.
duactitapema.com.br

V.BIKE Store Itajaí and Navegantes, SC
Catalog site for scooters, parts and the repair shop, with a color picker, model comparison and each customer sent to the nearer of two stores.
vbikestore.com.br

Sites in code, 2026

All built in 2026 with Claude in the process, and all of them are live. The apps are further up.

Judzi, B2B storefront
Wholesale storefront that reads the client's Shopify catalog. Prices never show up for the public, and the whole order goes out on WhatsApp.
332 products, 324 static pages and tests that block any leaked price.
judzi.cuoncient.com

Gabriela Seleme
Bilingual site for a visual artist, built like a gallery, with one artwork per screen and a full-screen film of her at work.
54 tests, Lighthouse in CI, security headers.
gabrielaseleme.com

Eloá
Launch page for a wellbeing and routine app of our own, with its own visual identity.
Tailwind, GSAP, esbuild.
eloa.cuoncient.com

Lúmen Editora
Redesign proposal for a publisher's site, with the catalog by genre, a page per author and the current launch up front.
lumen-editora.cuoncient.com

A client site, before and after

Art 7 Epoxy said the site was slow on phones. Between October 15 and 17, 2026, I found the causes and fixed them one by one. These are the Google PageSpeed scores.

71 Home page, phone was 39 **80** City page, phone was 22 **98** Home page, desktop was 84

Main thread blocked on the home page	Home page HTML	Font files
~~1,440 ms~~ **10 ms**	~~627 KB~~ **272 KB**	~~231 KB~~ **65 KB**

Where I work

Cuoncient CEO and developer
I run the agency with Agustin Pizarro and lead the technical side, from websites and systems to automation and AI.

DUACT Developer, invoicing and e-commerce

Electric scooter company in Porto Belo, SC. I issue the invoices through OMIE, run the Wix store and parts catalog, built the sales rep chatbot on WhatsApp and automated the invoice queue.

Art 7 Epoxy LLC Digital marketing and web, USA

Epoxy flooring company in Massachusetts. I handle local SEO with city pages, Google Ads and Local Services Ads, the automated blog, site speed and the reports.

Brazuka Club e Couponlandia App development, USA

Apps for the Brazilian community in the United States: the Brazuka Club Book directory, published on the App Store and Google Play, and the Couponlandia marketplace in South Florida.

HotelariaWeb partnership Social media and paid traffic

I run social media and Meta Ads for the partnership's clients, such as BR Oxigênio, which sells medical and industrial gases in Goiás. I also put together proposals and launch sites.

From 2024 to 2026

2024 Couponlandia marketplace, for deals and Brazilian vendors in South Florida.

May 26 First city pages for Art 7 Epoxy, built in Elementor.

Aug 26 Five-step quote calculator for Art 7, with leads going to HubSpot.

Oct 26 RAG over the Art 7 pages, Judzi, Kashi, the Center store with its Android APK, the video engine, the speed overhaul and the invoice panel.

2025 Sales rep chatbot on WhatsApp for DUACT, the link between the Wix store and OMIE, and the YourFace prototype with CLIP and Pinecone.

Jul 26 Meta Ads for V.BIKE at two stores, read in Python. Proposal and stack for Gabriela Seleme's site.

Sep 26 The blog engine goes live, and so does the operation's brain, with the vault, n8n and two Claude accounts.

Education and languages

Medicine, up to the 8th semester

Incomplete higher education. The course is currently on hold.

High school

Completed.

Português
Native

English
Fluent, TOEFL

Español
Advanced

日本語
JLPT N3 (日本語能力試験)

Beyond code

Financial analysis. Margins, ABC curve, pricing with taxes and cost per conversation.

Chart patterns. Technical analysis and price chart reading.

Off the clock

Guitar. I play and teach beginners.

Reading. I read books in my free time.

What I use every day

AI and models	Claude (API, Claude Code, Skills, MCP), ChatGPT, Gemini, DeepSeek, Manus, CLIP, gpt-image-1-mini, Ideogram, Recraft, Replicate, gte-small, rembg, Real-ESRGAN, DeepL
Agents and chatbots	Claude API with tools, n8n agent node, RAG with pgvector and Pinecone, Multi360 and Make on WhatsApp, webhooks on Vercel
Apps	App Store and Google Play, Android APK (Trusted Web Activity), installable PWAs with offline mode and service worker
Automation	n8n, Zapier, Make, GitHub Actions, Supabase Edge Functions, pg_cron, Apify, Formspree, OneUp
Programming languages	JavaScript, TypeScript, Python, PHP, SQL, HTML and CSS, GLSL (shaders)
Front-end	React 19, Next.js 16, Vite, Tailwind 4, GSAP, Three.js, Lenis, shadcn/ui
Data and back-end	Supabase (Postgres, pgvector, RLS), Firebase, Node e Express, Streamlit, Playwright, ffmpeg
Platforms	Vercel, GitHub, WordPress and Elementor, Wix Studio, Shopify (Admin API and embedded apps), OMIE, HubSpot, RD Station, Focus NFe
Marketing	Meta Ads, Google Ads, Local Services Ads, Search Console, GA4, Tag Manager, Clarity, Rank Math, Google Business Profile
Design and organization	Canva, CapCut Pro, Impeccable, Intent, Obsidian, TickTick
Quality	Playwright with axe (accessibility), Lighthouse CI, Vitest, security headers

How I work

I only use data that exists. / A person approves what goes live. / I measure before and after. / I log every decision.
