Guilherme Keidi Suzuki 鈴木 恵二

Full-stack developer and CEO of Cuoncient. I develop applications, AI agents and process automation for companies in Brazil and the United States.

suzuki.cuoncient.com

26 years old. Languages: Portuguese, English, Spanish and Japanese.

WhatsApp +55 (11) 93352-8251, suzuki.cuoncient.com, github.com/yugksuzuki. Born August 21, 2000.

Applications

Apps published on the App Store and Google Play, and APKs distributed directly to teams on Android. Each entry shows the app's registered identifier.

Brazuka Club Book

iOS and Android, App Store and Google Play

Business directory for the Brazilian community abroad: grocery stores, bakeries, pharmacies, gyms and clinics that serve customers in Portuguese, with hours, address and contact details for each.

More than 130 categories. Client: Brazuka Club LLC, USA. Version 1.0.22 on the App Store (December 2024).

br.com.brazukaclubapp brazukaclub.com

Center Painel

Android APK and installable web app

Operations app for the store: counter sales with a barcode scanner, order queue, courier module and consumer e-invoice issuance. Customers order through a second app installed from the browser.

APK built by GitHub Actions on every release (Trusted Web Activity). Next.js 16, Firebase and Focus NFe. Client: Center Conveniência, PR.

com.cuoncient.centerpainel loja.cuoncient.com

Couponlandia

Web app

A deals marketplace in South Florida, with Brazilian products, local vendors and daily coupons in the VIP area.

Runs on the phone as an app. VIP area in English, Portuguese and Spanish. Built in 2024.

marketplace.couponlandia.com couponlandia.com

Kashi

Installable app with offline use

App for learning Japanese through songs, with automatic furigana, translation and lyrics synced to the video.

A Cuoncient product. 36 automated tests. Three.js, GSAP and kuromoji.

jpcourse.cuoncient.com jpcourse.cuoncient.com

YourFace

Shopify app prototype

Recommends a store's products based on images the user saved on Instagram or Pinterest, using visual similarity.

Image embeddings with CLIP, vector search in Pinecone and an app embedded in Shopify. Node and Express, 2025.

github.com/yugksuzuki/insmatch

AI agents and automations

Systems in production for clients. Each entry details the architecture and running cost.

Agent patterns in use

Writer and checker. One step drafts and another validates the output against fixed rules; rejected drafts go back for rewriting. Used in the blog engine.

Routing. The agent classifies each inbox item as a task, an idea or a pending item. Used in the morning brief.

Human in the loop. AI proposes and a person approves before anything is published, billed or invoiced. Used in the invoice panel.

Semantic search (RAG). The model queries existing content before drafting to avoid repetition. Used on the city pages.

Blog engine

Art 7 Epoxy, USA

Produces and validates local SEO articles three times a week, delivered as drafts for review and publishing.

> Each draft passes 14 validation rules before reaching WordPress, with up to three automatic rewrites. Cost per article: US$ 0.10 to US$ 0.21.

Invoice panel DUACT, SC

Reads the order sheet daily and creates the invoice order through the ERP's API, with the total reconciled to the cent.

> It has created orders of 80 and 103 lines through the API. Exceptions are described in plain text and Claude proposes the line items; a person always issues the invoice.

Sales rep chatbot on WhatsApp DUACT, SC

The customer enters their city and the bot returns the regional sales rep with a direct WhatsApp link.

> It covers the sales reps for Rio Grande do Sul, Santa Catarina and Paraná, and recognizes the city despite typos, missing accents or the state written in full.

The operation's brain Cuoncient, in-house

Two Claude accounts and the n8n routines share a single knowledge base, keeping context across conversations.

> Morning brief on weekdays at 6:40 and a weekly review on Fridays. 77 files versioned on GitHub.

RAG over the client's pages Art 7 Epoxy, USA

Semantic search over the site's content so new city pages don't repeat those already published.

> Index of 51 pages and 526 passages. In the latest batch of 8 new pages, no 10-word sequence matched existing content.

Instagram post engine Cuoncient, pilot in development

Claude writes the copy and chooses the layout; the artwork is generated from an HTML template with the brand's tokens. Every post goes through an approval queue.

> Metrics are collected at 24 hours, 72 hours and 7 days. Claude proposes creative rules from them, and each rule enters the prompt only after approval.

Video engine BR Oxigênio, GO

A webhook request produces finished videos in the client's folder, in 9:16 and 4:5, with and without captions.

> Each render takes about 3 minutes and delivers 10 files, with audio normalized to –14 LUFS and near-zero additional cost.

Landing page from Instagram Cuoncient, client pages

Collects the client's profile, stores photos and captions in a repository and prepares the context to build the page.

> Collecting 50 posts takes 3 to 5 minutes at a cost of a few cents. Address, price and testimonials are included only when the client provides them.

AI product photos, checked by hand Center Conveniência, PR

Images are AI-generated only when no real photo exists, and each result is checked against the original packaging.

> All 260 products in the store have a photo: 199 from the previous menu and the rest generated and reviewed. Eight images were rejected for the wrong color or version.

Weekly page watch Art 7 Epoxy, USA

Every Monday at 10:00, it crawls the sitemap and files a report on template errors.

> It detects, for example, the template city's name left in the body text, FAQs and image alt text of other cities' pages.

Store and taxes through the API DUACT, SC

Applies the IPI tax discount and tax group to each product through the API, aligning the checkout total with the catalog.

> 105 products adjusted and checked against the store platform's tax calculation: 98 exact and 7 off by one cent.

Ad performance analysis V.BIKE, SC

Analysis of Meta Ads reports in Python to decide what to adjust and what to keep in the learning phase.

> After the targeting was corrected, cost per conversation at one store dropped to R$ 2.50; the best ad set reached R$ 2.02.

Proposals that become web pages Cuoncient and the HotelariaWeb partnership

Sales proposals published as web pages with their own link to share on WhatsApp, with an accompanying PDF.

> The B2B storefront proposal was delivered on the same day as the client meeting.

Processes turned into Claude skills Cuoncient, in-house

Processes validated with clients are documented as Claude skills to be reapplied on new projects.

> Among them: landing page from Instagram, page visual review, consolidated proposal and the Cuoncient web stack.

Cuoncient, digital agency

CEO and developer at Cuoncient, an agency for design, social media, web development, paid media and automation, with clients

in Brazil and the United States.

55 sites delivered on third-party platforms, **46** projects on Vercel and **16** custom domains in production.

Services

Design. Visual identity, website and landing page UI, print and digital pieces, art direction.

Websites and apps. Websites, landing pages, online stores and systems on WordPress, off-the-shelf platforms or custom code.

Automation and AI. AI-assisted content production, site monitoring, reports and system integrations.

Social media. Planning per platform, photo and video production, and pieces for feed, stories and reels.

Paid media. Meta Ads, Google Ads and Local Services Ads, with lead capture and qualification.

Featured projects

Art 7 Epoxy Massachusetts and New Hampshire, USA
Epoxy flooring site for New England, with city pages, quote requests and a custom estimate calculator.
art7epoxy.com

DUACT Itapema Itapema, SC
Landing page for the Maxus 1000W line, built for test rides and direct sales, with specs, batteries, showroom and WhatsApp support in one flow.
duactitapema.com.br

V.BIKE Store Itajaí and Navegantes, SC
Catalog site for scooters, parts and the repair shop, with color selection, model comparison and routing of each customer to the nearer store.
vbikestore.com.br

Custom-coded sites (2026)

Built in 2026 with Claude in the process, all in production.

Judzi, B2B storefront
Wholesale storefront connected to the client's Shopify catalog, with prices hidden from the public and orders sent via WhatsApp.
332 products, 324 static pages and automated tests that prevent price exposure.
judzi.cuoncient.com

Bilingual site for a visual artist structured as a gallery, with one artwork per screen and a full-screen video of her creative process.
54 tests, Lighthouse in CI, security headers.
gabrielaseleme.com

Eloá
Launch page for an in-house wellbeing and routine app, with a dedicated visual identity.
Tailwind, GSAP, esbuild.
eloa.cuoncient.com

Lúmen Editora
Redesign proposal for a publisher's website, with a catalog by genre, author pages and the current release featured.
lumen-editora.cuoncient.com

Website performance, before and after

Art 7 Epoxy reported the site was slow on mobile. Between October 15 and 17, 2026, I diagnosed and fixed the causes. Below are the Google PageSpeed scores before and after.

71 Home page, mobile before: 39 **80** City page, mobile before: 22 **98** Home page, desktop before: 84

Blocking time, home page	Home page HTML	Font files
~~1,440 ms~~ **10 ms**	~~627 KB~~ **272 KB**	~~231 KB~~ **65 KB**

Professional experience

Cuoncient CEO and developer
Agency leadership and technical responsibility for websites, systems, automation and AI.

DUACT Developer, invoicing and e-commerce
Electric scooter company in Porto Belo, SC. Invoicing in OMIE, management of the online store and parts catalog, development of the sales rep chatbot on WhatsApp and automation of the invoice queue.

Art 7 Epoxy LLC Digital marketing and web, USA

Epoxy flooring company in Massachusetts. Local SEO with city pages, Google Ads and Local Services Ads, automated blog, site performance optimization and reporting.

Brazuka Club e Couponlandia App development, USA
